Calculating gradients, rates, or percentages. Examiners look for: Correct graph axes and labels. Accurate plotting. Logical conclusions based on data.

Handling of Common Misconceptions

The mark scheme explicitly notes typical misconceptions and provides guidelines on awarding partial marks where appropriate. For example:

Misconception	Marking Guidance
Believing osmosis requires energy	Award AO1 for correct definition of passive process, but note misconception to avoid full marks if explanation is incomplete.
Confusing xylem and phloem	Award marks for correct identification if the student demonstrates understanding, but penalize inaccuracies in function description.
Overgeneralizing diffusion	Reward specific explanations involving concentration gradients and membrane properties.

Example Practice Question Breakdown

Question: A 2 kg mass swings in a vertical circle of radius 5 m. If released from rest at a height of 10 m above the lowest point, calculate:

a) The speed of the mass at the lowest point.

b) The tension in the string at the lowest point if the mass is moving at this speed.

Step-by-step approach:

Part a: Use conservation of energy

Potential energy at release: $(PE = mgh = 2 \times 9.8 \times 10 = 196, \text{J})$

At the lowest point, all potential energy converts into kinetic energy: $(KE = \frac{1}{2}mv^2)$

$(v = \sqrt{\frac{2 \times PE}{m}} = \sqrt{\frac{2 \times 196}{2}} = \sqrt{196} = 14, \text{m/s})$

Part b: Calculate tension

Centripetal force: $(F_c = \frac{mv^2}{r} = \frac{2 \times 14^2}{5} = \frac{2 \times 196}{5} = 78.4, \text{N})$

Tension $(T = F_c + mg = 78.4 + 2 \times 9.8 = 78.4 + 19.6 = 98, \text{N})$
