Fundamental Concepts in EMF for ECE

Understanding the basics is crucial before diving into advanced topics. Here's a breakdown of core concepts covered in EMF lecture notes:

Electric Field (E-Field)

Definition: A vector field around electric charges, representing the force exerted per unit positive charge.

Mathematical Representation: $\vec{E} = \frac{\vec{F}}{q}$

Properties: Lines originate from positive charges and terminate at negative charges. The electric field due to point charges follows Coulomb's law.

Magnetic Field (H-Field)

Definition: A vector field produced by moving charges (currents) or changing electric fields.

Relation to Current: Magnetic fields are generated by steady currents (Ampère's Law). Changing electric fields induce magnetic fields (Faraday's Law).

States that electric charges produce electric fields. ρ is the charge density; ϵ_0 is permittivity of free space.

Gauss's Law for Magnetism

$$\nabla \cdot \vec{B} = 0$$

Implies no magnetic monopoles exist; magnetic field lines are closed loops.

Faraday's Law of Induction

$$\nabla \times \vec{E} = -\frac{\partial \vec{B}}{\partial t}$$

Changing magnetic fields induce electric fields.
