Overview of Dragnet Abstract Reasoning Sample Test

The Dragnet abstract reasoning sample test is designed to simulate real examination scenarios, challenging candidates to decipher patterns and solve puzzles efficiently. These tests typically feature sequences of shapes, colors, sizes, and orientations, requiring candidates to identify the underlying rule governing each pattern.

Common Types of Questions in Dragnet Tests

- Pattern Completion:** Filling in the missing element in a sequence based on observed patterns.
- Sequence Identification:** Determining the next shape or element in a series.
- Odd One Out:** Identifying the shape or pattern that does not conform to the rest.
- Matching Pairs:** Finding two elements that share a specific relationship.

Steps to Approach Dragnet Abstract Reasoning Sample Test Questions

- 1. Carefully Observe the Given Patterns** Start by examining the provided shapes or sequences. Look for simple differences like changes in color, size, or orientation. Pay close attention to the progression or repetition of patterns.
- 2. Identify the Underlying Rule** Determine whether the pattern is based on shape, color, number, or a combination. Check for sequential changes, such as rotation angles or incremental size increases. Observe if the pattern follows a specific sequence or alternates between different elements.
- 3. Test the Pattern Hypothesis** Apply your identified rule to predict the next element. Cross-verify with the options provided to select the most appropriate answer.
- 4. Eliminate Implausible Options** Use process of elimination to discard options that do not fit the identified pattern or rule. This helps narrow down choices and increases accuracy.
- 5. Practice with Sample Questions** Regular practice with sample tests enhances pattern recognition speed and accuracy. Familiarize yourself with common patterns and develop strategies to decode them efficiently.

Sample Dragnet Abstract Reasoning Problem and

Solution Question: Observe the following sequence of shapes: Shape 1: Red square Shape 2: Blue circle Shape 3: Green triangle Shape 4: ? Options: Yellow square Red triangle Blue square Green circle

Solution Process: Identify the pattern: Notice the sequence involves changing shapes and colors. The colors seem to cycle through red, blue, green, and then back to a new color. Shapes are changing in a specific order.

Analyze color pattern: Red ? Blue ? Green ? ? The colors do not repeat in a simple cycle, but observe that the sequence introduces a new color: Yellow. Since the first three shapes are primary colors, the next color could be the remaining primary color, or a new one following the pattern.

Analyze shape pattern: Square ? Circle ? Triangle ? ? Shapes are changing sequentially in a pattern: square, circle, triangle, and then likely to repeat or follow a pattern.

Determine the missing shape and color: Given the options, the most logical choice is a shape that completes the pattern. Option A: Yellow square matches the color pattern and maintains the sequence of changing shapes.

Answer: Option A: Yellow square.

Tips to Ace Dragnet Abstract Reasoning Tests:

- Practice Regularly:** Consistent practice improves pattern recognition speed.
- Stay Calm and Focused:** Stress impairs cognitive functions; maintain composure during the test.

Analyzing the Sample Test Solution Providing solutions to abstract reasoning tests involves understanding the core logic behind pattern recognition. Let's analyze the typical approach used in solving Dragnet sample tests.

Step-by-Step Approach to Solutions

- Observation of Patterns** Carefully examine the given sequence or matrix, noting changes in shapes, colors, positions, or sizes.
- Identify the Rule or Relationship** Determine whether the pattern involves:
 - Progression (e.g., increasing/decreasing size or number)
 - Rotation or reflection
 - Color alternation
 - Shape transformation
- Test Hypotheses** Apply the identified rule to predict the next figure or missing element. Verify if the hypothesis holds across all provided figures.
- Eliminate Incorrect Options** Cross out choices that violate the pattern or rule, narrowing down to the most logical answer.
- Select the Correct Answer** Finalize the choice that best fits the pattern deduced.

Sample Problem and Its Solution

Problem: Given a sequence of three images:

- Image 1: A red circle
- Image 2: A blue square
- Image 3: A green triangle

What is the next figure?

Solution Approach: Colors cycle through red, blue, green, then back to red. Shapes cycle through circle, square, triangle, then repeat. Since the sequence follows a pattern where both color and shape advance sequentially, the next figure should be a red circle.

Practical Examples of Dragnet Solution in Numerical Reasoning

Example 1: Percentage Problem

Question: A shop sold 120 units of a product at a profit of 20%. If the cost price per unit is Rs. 50, what was the total selling price?

Solution Using Dragnet Approach:

Step 1: Understand data: Cost price per unit = Rs. 50 Profit = 20% Units sold = 120

Step 2: Calculate selling price per unit: Profit per unit = 20% of Rs. 50 = $0.20 \times 50 = \text{Rs. } 10$ Selling price per unit = Rs. 50 + Rs. 10 = Rs. 60

Step 3: Calculate total selling price: Total = Rs. 60 $\times$ 120 = Rs. 7200

Final Answer: Rs. 7200

This example demonstrates the systematic

Step-by-Step Guide to Dragnet Solution Numerical Reasoning

Let's explore a detailed approach with an example to illustrate how to implement dragnet solutions effectively.

Example Problem: In a company, the number of employees increased by 20% last year. If the current number of employees is 720, what was the number of employees two years ago?

Step 1: Understand the Question

You're asked to find the original number of employees two years ago, given the current number and the percentage increase over the last year.

Step 2: Identify Relevant Data

Current employees = 720
Percentage increase last year = 20%
Time frame: Two years ago

Step 3: Break Down the Problem

First, determine the number of employees after the 20% increase last year. Then, understand the growth over the two-year span.

Step 4: Reverse the Percentage Increase

Since the current number (720) reflects a 20% increase over the previous year, you can find the number of employees after the first year (i.e., at the end of last year):

Employees after 1 year = Current employees / (1 + percentage increase)

Expressed mathematically: Employees after 1 year = $720 / 1.20 = 600$

Step 5: Understand Growth Over Two Years

The problem asks for the number of employees two years ago. Assuming the same percentage increase applies each year:

Let the number of employees two years ago = x

After one year: $x (1 + 20\%) = x \cdot 1.20$

After two years: $x (1.20)^2$

We know after two years, the number of employees is 600 (from Step 4), so: $x (1.20)^2 = 600$

Step 6: Solve for x

Calculate: $x = 600 / (1.20)^2$
 $x = 600 / 1.44 \approx 416.67$

Answer: Approximately 417 employees were there two years ago.
