**Explanation:** Candidates should demonstrate reading from and writing to files using `fopen()`, `fprintf()`, `fscanf()`, `fclose()`, etc.

**Q12. What are the modes of opening a file?**  
**Explanation:** Modes like read (`r`), write (`w`), append (`a`), and their implications should be explained.

### System Programming Concepts

**Q13. Explain the concept of pointers to pointers.**  
**Explanation:** This is an advanced topic where a pointer points to another pointer, useful in multi-level data structures or dynamic memory handling.

**Q14. What is the significance of the `volatile` keyword?**  
**Explanation:** Candidates should understand that `volatile` prevents the compiler from optimizing out variable reads/writes, crucial in embedded systems.

### Object-Oriented Programming (C++ Context)

**Q15. How is encapsulation achieved in C++?**  
**Explanation:** Discuss access specifiers (`private`, `public`, `protected`) and data hiding principles.

**Q16. What are constructors and destructors?**  
**Explanation:** Explain automatic initialization and cleanup of objects.
