Sample Questions from the 2013 Paper and Mark Scheme Insights Below are common question types from the 2013 paper, along with insights into the corresponding mark scheme:

- Describe how the acceleration of an object changes when it is subjected to a constant force.

Expected Answer: Acceleration increases proportionally with the applied force (Newton's Second Law). As force increases, acceleration increases. As force decreases, acceleration decreases.

Marking Points: Mention of proportionality between force and acceleration. Reference to Newton's Second Law ($F=ma$). Clear explanation of the relationship.

Common Errors: Confusing force and mass. Saying that acceleration is constant.

regardless of force. 2. Explain why a metal wire expands when it is heated. Expected Answer: Heating increases the temperature of the metal atoms. Increased temperature causes atoms to vibrate more. Vibration of atoms pushes neighboring atoms apart, resulting in expansion of the wire. Marking Points: Connection between heat and atomic vibration. Explanation of how vibrations lead to expansion. Use of appropriate scientific terminology. Common Errors: Vague answers like "metal expands when heated" without explanation. Confusing expansion with other thermal properties. How to Use the Mark Scheme for Effective Revision: To maximize your exam performance, follow these strategies: Review past papers and mark schemes: Practice answering questions and then check against the mark scheme to identify gaps. Key Features of the Mark Scheme

Structured Marking Points Each question is broken down into specific points that students are expected to include in their answers. For example, a question asking about the forces acting on an object might have marking points such as: Identification of the force (e.g., gravity, friction) The direction of each force The effect of these forces on the motion

Awarding of Partial Marks Marks are often awarded for partially correct answers, encouraging students to demonstrate understanding even if they miss some points. For example: Correct identification of one force earns some marks Complete explanation earns full marks

Common Keywords and Phrases The mark scheme highlights keywords that indicate correct understanding, such as: "Opposes motion" "Conservation of energy" "Increase in temperature" Using these keywords can help students match their answers to the expected responses.

Detailed Breakdown of Key Sections

Motion and Forces

Question Example: Describe the forces acting on a freely falling object.

Mark Scheme Highlights: The force of gravity acts downward (1 mark) No other forces if air resistance is negligible (1 mark) If air resistance is considered, mention it acts upward opposing gravity (additional mark)

Common Student Errors: Confusing mass with weight Omitting the role of air resistance where relevant

Tips for Students: Clearly state the direction and nature of each force Use the correct terminology such as "weight" for gravitational force

Energy, Work, and Power

Question Example: Explain how energy is conserved during the movement of an object up a slope.

Mark Scheme Highlights: The object gains gravitational potential energy (1 mark) The work done on the object increases its energy (1 mark) Energy is conserved, assuming no energy losses (1 mark)

Common Student Errors: Confusing energy with power or work Forgetting to mention conservation of energy

Tips for Students: Emphasize the transfer of energy and the principle of conservation Use diagrams where appropriate to illustrate energy transfer

Thermal Physics

Question Example: Describe the process of heat transfer by conduction in a metal rod.

Mark Scheme Highlights: Vibrations of particles transfer energy (1 mark) Free electrons in metals facilitate heat transfer (additional mark) Heat flows from hot end to cold end (1 mark)

Common Student Errors: Omitting the role of free electrons Confusing conduction with convection or radiation

Tips for Students: Mention both particle vibrations and free electrons in metals Use precise language to differentiate heat transfer methods

Waves and Sound

Question Example: Explain why sound travels faster in steel than in air.

Mark Scheme Highlights: Particles in steel are closer together (1 mark) Sound waves are mechanical vibrations transmitted through particles (1 mark) The elastic properties of steel are better suited for rapid transmission (additional mark)

Common Student Errors: Failing to mention the material's elastic properties or density Confusing the speed of light with sound
